The IEEE International Symposium on Circuits and Systems (ISCAS) is the flagship conference of the IEEE Circuits and Systems (CAS) Society and the world’s premiere forum for researchers in the active fields of theory, design and implementation of circuits and systems. This is accomplished through technical conference sessions, poster sessions, live demonstration sessions, and publication of conference papers. ISCAS 2025 will be driven by the theme “Technology Disruption and Society” aiming to emphasize the potential of the CAS Society to find innovative solutions to challenges facing society today.

Unless conditions change substantially over the coming year, ISCAS 2025 will be an in-person event and authors are expected to be onsite to present their papers.

Selected papers will be invited for possible publication either in the IEEE Transactions on Circuits and Systems – Part I, in the IEEE Transactions on Circuits and Systems – Part II, or in the IEEE Transactions on Biomedical Circuits and Systems.

London, the capital of the United Kingdom, is a 21st-century city with history stretching back to Roman times. At its centre stand the imposing Houses of Parliament, the iconic ‘Big Ben’ clock tower and Westminster Abbey, site of British royal coronations. Across the River Thames, the London Eye observation wheel provides panoramic views of the South Bank cultural complex, and the entire city.
